- 10.1" monitor comes with the following inputs: 1 composite & 1 HD-SDI
- Line of ELITE (Non-Empire) 4K LCD monitors in work with dual 4K60 HDMI inputs

ELITE

VIDEO SWITCHING SOLUTIONS

The Ultimate Audio / Video System

The ELITE Audio Video Switcher provides 4 composite video inputs, 4 HD SDI inputs, 4 HDMI (1080P) inputs with 2 unswitched pass through HDMI at 4K, 12 audio inputs, 4 composite video outputs, 8 HD SDI outputs and 4 HDMI (1080P) and 16 independent volume controlled audio outputs. Each input is full matrixed to any of the outputs for great all in one solution for your HD cabin.

The ELITE Aux Input Panel provides a great way to add either 1080P or 4K60 audio and video input to a partial system upgrade. The panel is capable of wireless communication and control to our EVOLVE series of switches and our ELITE HD touch monitors for control. The panel provides a single HDMI, USB-C (charging and audio/video), USB-A (charging) and bluetooth 5.0 input for audio.

The video is sent over 2 (supports 2 monitors) CAT-6 ethernet and converted at the other end to a short HDMI cable to allow longer ethernet cable runs (up to 200 ft) without any signal degradation.

Audio is sent over 2 audio outputs that allow for either USB-C or HDMI audio and/or Bluetooth audio. Audio can be independently switched to the new or existing audio system.
